Submitted on 03/06/2018 3:24PM

Submitted values are:

Name: Mary Kendall

Email Address: [REDACTED]

Comment: I have lived within 5 miles of this land fill for 50 of my 57 years. I have watched this and been effected by it. If you look at the medical data you will see that a significant number of former Carrollton subdivision residents have died or have rare cancers, immune complications, MS, thyroid diseases, migraines of unknown origins. Yes this site needs to be cleaned up for stopping short and only doing as much as you legally can get by with does not protect the workers and residents from future issues when that fire reaches the remaining radioactive materials. If you are renovating a house and find lead paint you have to get rid of all of that paint, you can not remove just a portion of it, The same thought goes into the removal of this radioactive materials. Unless you can guarantee that you have blocked off all of that material from possible ground water contamination , from possible fire, from possible earthquake, from possible tornado, then you are not making the area around it safe.
